Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This pair of two-story, two-bay wide vernacular Queen Anne-style brick houses with shed roofs and decorative brick cornices were built c. 1895, after the use of wood was outlawed for cornices in 1892. The use of decorative brickwork on cornices and facades was first seen on elegant Baltimore rowhouses in the early 1880s. The houses retain their original brick facades, which were always painted.

The houses are two stories in height, 12' wide and occupy lots 52' deep. Each house is only two rooms deep and there is no backbuilding. The houses are constructed in common bond and were originally painted. Each house has a single hooded chimney located at the rear corner of the house. The shed roofs are capped by a decorative brick cornice consisting of a row of diagonally-placed headers set above a notched band created by alternating projecting and recessed headers, set above a frieze area of five rows of slightly projecting stretcher bricks.

The window and door openings have splayed brick lintels and wood sills. All sash are modern single-panel replacements that are hinged at the top and open out. The single light doorway transom has been much enlarged (and also opens out) so that the replacement doors can open directly onto the street. The houses sit on medium-height basements, lit by a single-light sash, and each house was originally reached by several steps.

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses significant as representing the level of architectural stylishness builders were willing to give to small street houses in the late nineteenth century and is testament to the fact that there was no stigma attached to small street living. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period c. 1870 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide three-bay-wide, two-story houses on the main streets, and smaller, 11' to 13'-wide two-bay-wide, two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 - \$1,500; small street houses for \$700 - \$900.

Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the Baltimore & Ohio railroad yards and related industries and to the slaughterhouses of southwest Baltimore and their related industries, particularly the William Wilkens & Co. Curled Hair Manufactory, one of the largest employers in the area. Moderately-priced housing was built to provide homes for the mainly German immigrants who came to southwest Baltimore to work in these rapidly expanding industries in the decades after the Civil War.
